### SEROLOGY & IMMUNOLOGY

ST	VALUE	UNIT	REFERENCE
Dengue NS1 Antigen	Negative		

#### Interpretation >

A positive NS1 test result confirms dengue virus infection without providing serotype information. A negative NS1 test result does not rule out infection. People with negative NS1 results should be tested for the presence of dengue IgM antibodies to determine possible recent dengue exposure.

### Widal (Slide Method)

Tube agglutination test for Salmonella group of organisms reveal following titres.

	1/20	1/40	1/80	1/160	1/320
S TYPHI 'O'	•	•	•	•	-
S TYPHI 'H'	•	•	•	-	-
S PARATYPHI 'AH'	•	•	-	-	-
S PARATYPHI 'BH'	•	•	-	-	-

Comment: WIDAL TEST «POSITIVE»

Antibody titre of 1/80 or higher suggests infection. A marked rise in the titre to one serotype to (above 1/80) or paired sample collected at 5 to 7 days interval is regarded as diagnostically significant. However persons who have received TAB vaccine may show high titre of antibodies to each of the salmonellae.
